

TSL REICO PRODUCTS

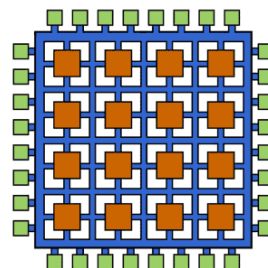

TSL is now offering the complete Reico product line including Switch Matrices, Multicouplers, and Amplifiers.

Originally produced under the Aiken Advanced Systems name, all of the products have been maintained and are fully supported.

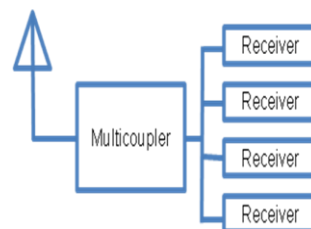

SWITCH MATRIX PRODUCTS

The TSL family of Switch Matrix Products provide a myriad of solutions for switching a variety of signals. Standard configurations are available for switching audio, digital, video, and HF/UHF/VHF signals in densities as high as 384 x 256. The product line includes two control units that may be used for controlling any of the switch matrix offerings.

MULTICOUPLERS

For applications requiring the connection of several receivers to one antenna, and properly matching the impedances of the receivers to the antenna, the TSL line of Multicouplers provide a reliable, low-cost solution. A variety of configurations are available for use with LF, HF, UHF, and VHF frequencies and with outputs ranging from 4, 6, 8, 12, and 16 from a common input.

AMPLIFIERS

TSL offers a line of wide dynamic range amplifiers for LF and HF frequency applications. Standard configurations are available with various gains, impedance, bandwidth, noise figure, connections, and form factors. Custom amplifiers are available upon request.
